
Sugar Grove Police Facility site schematic

Project Features:

- 18 acre site
- 90,000 square feet of building space
- 200 space parking lot
- Underground utilities
- Mass grading
- Access/entrance roads
- 5 ac-ft stormwater detention

The Village of Sugar Grove is planning the construction of a new police facility on a 19-acre site at the northwest corner of US 30 and Municipal Drive.

As part of this project, EEI is providing land surveying, site engineering and construction services.

EEI has completed topographic and boundary surveys and, as part of the design team, has provided the schematic plan based on the architect's concept development sketch. Once approved, a preliminary engineering plan will be developed and approved before proceeding with final engineering and creation of construction documents for all site improvements.

Specific site improvement specifications are yet to be determined, but they will include water main, sanitary sewer, storm sewer, detention and a 200+ space parking lot.

Based upon federal funding for improvements to US 30 and the extension of Municipal Drive, additional improvements will include a shared Aurora Municipal Airport/Sugar Grove Police Facility access drive at US 30 and another entrance from Municipal Drive.
